Nema 3R Enclosures

Application

- Designed for use as wire containment and protection from electrical shock.
- Can be used for many different applications such as switchgear extensions or junction boxes.
- Designed for exterior use or where the environment is wet.
- All units are custom designed and manufactured for optimal fit and function.

Standard

- UL508 type 3R
- UL50 type 3R

Construction

All products are manufactured from 14 gauge steel or thicker. Other materials can also be used such as stainless, aluminum and galvanized steel. All parts are welded resulting in longer product life. All sharp edges are removed for safer installation. A back pan or other internal structure can also be fabricated.

Finish

Finishes are determined by the customer. Steel parts are painted with industrial grade, high solids paint or powder coating—paint color selected by customer. Aluminum enclosures can be painted as specified or anodized. Stainless steel is available in a 2B or #4 finish as well as many other choices. Back pans are painted white. The customer can choose a paint application quality between a basic finish and a high end Class "A" finish.
